Instrument Specification

Instrument Type Fully automatic random access chemistry analyzer Constant speed 330 T/H, 575 T/H Throughput

Testing Method One-point end, two-point end, rate (kinetic), two points rate, mono/double

wavelength, eliminate reagent and sample blank immunoturbidimetry **STAT Function** Emergency samples can be added

during routine test

Sample System

Sample Disk 71 sample positions (including routine sample, calibration, QC and

STAT positions), support primary tubes and sample cup

Collision Probes and washing arm collision Detection

Sample Probe Inner & outer high polished probes

> with low carry over Liquid level detection

Volume tracking function during

Sample Volume 2~35 µL, variable in 0.05 µL

Reaction System

Reaction Cuvette 90 high permeable UV cuvettes Hard glass cuvette optional

Washing System 8-probe 10-step with detergent Extra cleaning optional for specific

test items

Mixing System Independent stirrer Reaction Volume Minimum 150 µL

Incubation System Air bath heating 37 ± 0.1℃

Calibration and QC

Calibration Linearity calibration (single point, two

points, multi points)

Non-linearity calibration (Logit-Log4P, Logit-Log5P, exponential function, spline, exponential 5P, parabola,

Wei Bull)

QC Rules Westgard multi-rules, Levey-Jennings

rules and diverse levels of QC

Reagent System

Reagent Disk 60 positions compatible with several

types of bottles

Cooling System Independent 2~8°C 24 hours non–stop

cooling system

Washing System Warm water washing for cuvettes and both inner and outer of the probes

Reagent Probe Inner & outer high polished probe with low carry over

Reagent volume tracking function

during aspiration

Reagent Volume 10~300 μL, variable in 0.5 μL

Optical System

Light Source

Long life halogen lamp 12V/20W Optical System High resolution filters with 10

wavelengths

340nm, 405nm, 450nm, 492nm, 510nm, 546nm, 578nm, 630nm,

700nm, 800nm

Operation System

Operation System Windows 7, 10

Testing Sequence Programmable test sequence

Maximize test speed and minimize

Advanced Features

after test cycle finish Exceed linearity and high

Reaction reading points traceable

concentration sample auto-dilution

Real-time monitoring reaction process Bi-directional LIS/HIS

Report

LIS Protocol

Data Storage

Various editable customized formats Depend on PC host memory capacity

Others

950mm(L) × 680mm(W) × 1110mm(H) Dimension

Weight 174 kg

Water Consumption ≤8 L/H during operation

URIT-8210

Automatic Chemistry Analyzer

Constant 330 T/H. 575 T/H with ISE

User Friendly Interface, Tailor-Made

High System Reliability

Minimal Intervention Demands

URIT Medical Electronic Co., Ltd.

Guilin, China

Minimize Operator Time

- Real-time monitor temperature, distilled water and waste
- One-key pause sample & reagent disks during testing to add new samples and reagents
- Integrated inner bar code reader for sample & reagent

Increase Productivity

- 575 T/H with ISE module
- 90 reaction cuvettes and 20 dummy sample trays
- 60 on-board parameters

Minimal Intervention Demands

Real-time Workflow Follow Up

■ Control all operations from main interface (routine, STAT, temperature, etc.)

■ Multiple alarms, auto-retest and auto-dilution functions for over linearity or

- Auto clean cuvettes clean before & after testing
- Auto lamp sleep function to prolong life span
- Software data auto-backup function
- Auto exhausting pipeline air bubbles

substrate exhausted samples

■ Calculated results available

Reaction curve saved for every tests

URIT Reagent

- Ready to use reagent
- Liquid formulation packaged in bar coded catridges for on–board use
- Multi-positions for same reagents on-board, the analyzer will switch to the next one when one cartridge is finished
- Traceable QC and standard materials

■ 71 sample positions, 60 reagent positions and 90 reaction cuvettes

■ 24 hours non-stop, 2~8°C constant ice-free cooling system

■ Constant 330 T/H, 575 T/H with ISE

Air bath heating incubation system

■ High accuracy filters optical system

■ Bi-directional LIS/HIS

■ Probes & washing arm collision protection User–friendly software, easy operation

Guarantee High Quality Results

- 37 ± 0.1 °C reaction incubation by air bath heating system
- 2~8°C, 24 hours non-stop sample and reagent cooling system
- 0.05 µL variable sampling accuracy
- 10 wavelengths and free maintenance high resolution filters optical system
